

1) When is a relation a function? What are some ways to tell if a relation is a function?

2) What is the domain of a function? What is the range of a function?

If $f(x) = -4x - 7$, find...

If $f(x) = -3x^2 - 2x + 1$, find...

3) a) $f(3)$ b) $f(-7)$

4) a) $f(-4)$ b) $f(0)$

For each question, decide if it is a function. Then find the domain and range. Find the intercepts, if possible.
